Dipper Well Flow Levels and Corresponding Water Waste Estimates

Notes

• the amount of dipper wells in use is estimated at 2,453 in Southern Nevada
• the flow of water in dipper wells varies greatly from store-to-store, by company, corporate or franchise, varying policy, and in particularly by employee and time of day
• the estimate of .13 gpm is the most conservative estimate of the possible range of use
• dipper wells are an imprecise tool with no metered flow rates for water usage
