6 years old or 60 pounds
Nevada’s Car Seat Law

- Lap and shoulder belts protect average size adults, but children need additional protection. Booster seats give children the lift they need so lap and shoulder belts can do their job.

- Children should stay in a booster seat until the adult lap belt stays on the upper thighs, away from their stomach, and the shoulder belt comes across the chest without rubbing their neck.

- Passengers should never ride with the shoulder belt under their arm or behind their back.

- The National Highway Traffic Safety Administration recommends properly restraining children in booster seats until they are at least 8 years old, unless they are 4'9" tall.
